Canadian Data Report of Fisheries and Aquatic Sciences 1080

Fisheries and Oceans Pêches et Océans

Canada

Canadian Technical Report of Fisheries and Aquatic Sciences

Technical reports contain scientific and technical information that contributes to existing knowledge but which is not normally appropriate for primary literature. Technical reports are directed primarily toward a worldwide audience and have an international distribution. No restriction is placed on subject matter and the series reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Technical reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-456 in this series were issued as Technical Reports of the Fisheries Research Board of Canada. Numbers 457-714 were issued as Department of the Environment, Fisheries and Marine Service, Research and Development Directorate Technical Reports. Numbers 715-924 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Technical Reports. The current series name was changed with report number 925.

Technical reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport technique canadien des sciences halieutiques et aquatiques

Les rapports techniques contiennent des renseignements scientifiques et techniques qui constituent une contribution aux connaissances actuelles, mais qui ne sont pas normalement appropriés pour la publication dans un journal scientifique. Les rapports techniques sont destinés essentiellement à un public international et ils sont distribués à cet échelon. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports techniques peuvent être cités comme des publications complètes. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports techniques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 456 de cette série ont été publiés à titre de rapports techniques de l'Office des recherches sur les pêcheries du Canada. Les numéros 457 à 714 sont parus à titre de rapports techniques de la Direction générale de la recherche et du développement, Service des pêches et de la mer, ministère de l'Environnement. Les numéros 715 à 924 ont été publiés à titre de rapports techniques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 925.

Les rapports techniques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

Abstract

Hayward, J. 2001. Weekly fish counts from in-river traps and barrier pools in the Miramichi River, New Brunswick, 1994 to 1999. Can. Data Rep. Fish. Aquat. Sci. 1080: 104p.

Counts and cumulative counts of 23 fish species are summarized by year and standardized week from 13 in-river traps and barrier fences located in the Miramichi River, New Brunswick, from 1994 to 1999. Trapnets and barriers include those operated by the Department of Fisheries and Oceans, New Brunswick Provincial Government, Eel Ground First Nation and Red Bank First Nation.

Key words: Fish counting, Atlantic salmon, Miramichi River, New Brunswick.

Résumé

Hayward, J. 2001. Weekly fish counts from in-river traps and counting fences in the Miramichi River, New Brunswick, 1994 to 1999. Can. Data Rep. Fish. Aquat. Sci. 1080: 104p.

On présente les dénombrements individuels et les dénombrements cumulatifs de 23 espèces de poisson, par année et par semaine normalisée, selon les prises obtenues au moyen de 13 barrières de dénombrement et casiers posés en eau vive dans la rivière Miramichi, au Nouveau-Brunswick, de 1994 à 1999. Les filets-trappes et les barrières de dénombrement incluent ceux qui sont exploités par le ministère des Pêches et des Océans, le gouvernement provincial du Nouveau-Brunswick, la Première Nation d'Eel Ground et la Première Nation de Red Bank.

Mots clés : dénombrement de poisson, saumon atlantique, rivière Miramichi, Nouveau-Brunswick.

Introduction

The Miramichi is the second largest river system in New Brunswick, with a drainage area of approximately 14,000 sq. km (Randall *et al.* 1989). Its two main branches, the Northwest and the Southwest, flow into a common estuary just upstream from the city of Miramichi and discharge into Northumberland Strait, Gulf of St. Lawrence at latitude 47°N (Fig. 1).

In the past, the Miramichi River supported a substantial commercial fishery for Atlantic salmon, which was closed as of 1984. Currently, there is a commercial catch of gaspereau, smelt, shad and eels, and First Nations have an allocation of salmon and other species for food and ceremonial purposes. The run of Atlantic salmon, extending from June through October, has historically supported a recreational fishery of considerable local economic importance. As of 1985, large salmon (63 cm or more) had to be released by anglers and only small salmon (less than 63 cm) could be retained, a regulation that is still in effect.

For the purposes of assessing stock status and managing harvests of Atlantic salmon, the federal Department of Fisheries and Oceans (DFO) has operated counting facilities at various locations in the Miramichi River since 1952. During the past decade, DFO has also worked in co-operative assessment projects with Eel Ground and Red Bank First Nations. These efforts involved the installation and operation of trapnets to count and mark fish in tidal waters above the confluence of the Northwest and Southwest Miramichi Rivers. Additionally, barrier fences, located at major pools in headwater areas, were operated by the New Brunswick Department of Natural Resources and Energy (NBDNRE) to provide protection for salmon near their spawning grounds (Madden *et al.* 1999). Fish counts at Miramichi facilities, as well as others in southern Gulf of St. Lawrence rivers, have been summarized up to 1993 by Claytor (1996). The present report provides weekly and cumulative counts of all fish species caught at Miramichi sites from 1994 to 1999.

Methods and Results

Trapnets operated exclusively by DFO were located in the Southwest Miramichi at Millerton and in the Northwest branch at Hackett's Beach and Cassilis (Table 1, Fig. 1). The latter two traps were used to assess the downstream migration of smolts from early May to mid June, and adult salmon ascending the river from then until the end of the fall run. The box portion of the traps measured approximately 3.7 m (12') wide by 18.3 m (60') long and was constructed with 1.9 cm (0.75") knotless nylon mesh for smolts, or 5.7 cm (2.25") mesh for adults. A single leader, extending from shore to the trap was made from 12.7 cm (5") mesh polypropylene. The nets were mounted on a wooden frame built on pickets driven into the riverbed. Traps were usually configured to fish in an upstream direction although Hackett's Beach fished upstream and downstream. The Millerton trap (Fig. 2) was typical of such structures; further

details of trapnet construction can be found in Chaput *et al.* (MS1997). All fish caught in the traps were counted; adult salmon were also sexed (external characteristics), measured, fitted with numbered Carlin tags for subsequent mark-and-recapture estimates, and released. Smolts were marked with numbered streamer tags. Salmon were identified as either wild, or of hatchery origin (adipose fin clipped), at the estuary trapnets but not at the NBDNRE barrier pools.

Traps similar to the above were operated by Eel Ground First Nation in the Northwest adjacent to the Reserve (two traps) and further upstream near the Miramichi Hatchery (one trap), as well as in the Southwest near the upstream boundary of the Enclosure Provincial Park (two traps)(Table1, Fig. 1). Red Bank First Nation operated two traps at the confluence of the Little Southwest and Northwest rivers. These initially had a pair of downstream leaders in a "V" configuration, but were modified in 1999 to the form described above, resulting in a higher efficiency (Chaput *et al.* 2001). Salmon and other species were removed from First Nations facilities for food and ceremonial purposes as per fisheries agreements with DFO, otherwise adult salmon were treated as described above.

Traps located in the estuary intercepted only a proportion of migrating fish and so provided only partial counts. Also, since they were used as mark-and-recapture sites, some fish were captured more than once; these recaptures have not been removed from the counts. Barrier fences obstruct the entire river and all upstream migrants are intercepted (for further details of construction and operation see Madden *et al.* 1999). All facilities were normally operated seven days a week except during high water events and/or washouts; these have not been identified for this report. At the Northwest and Dungarvon barriers, salmon and trout were recorded daily, but only salmon at the Southwest barrier.

The dates of operation for Miramichi River counting facilities are indicated in Table 2. A total of 23 species have been identified and counted at these locations (Tables 3, 4). A system of standardized weeks (Table 5) is used to report weekly and cumulative totals for all species recorded from these sites. These tabulations follow Table 5, and are organized by river branch, facility (proceeding upstream), and species. In the tables, a "." at the beginning or end of a year indicates that the traps or barrier fences were not installed.

Biological data collected for Atlantic salmon at DFO trap sites can be found in the following documents: Chaput *et al.* MS1995, MS1996, MS1997, MS1998, MS1999, MS2000, Chaput 1999, and Moore *et al.* 1995). Any discrepancies in counts between those reported in the aforementioned publications and this report are due to subsequent file corrections. The Northwest Eel Ground trapnets referred to here (NWEGI, NWEGH and NWEGFFT) have been assigned various descriptors in former documents and can be cross-referenced using Table 6.

Acknowledgements

The author thanks members of Eel Ground and Red Bank First Nations who operated counting facilities and collected relevant data, and particularly Clifford Ginnish and Roy Ward who coordinated fisheries activities, respectively, for these two groups. Bernie Dubee (DNRE) provided the catch records for the Northwest Miramichi and Dungarvon barriers, and Pam Seymour (DNRE) for the Southwest Miramichi barrier. Department of Fisheries and Oceans employees who contributed to data collection include Gerald Chaput, Dave Moore, Michel Biron, Gary Atkinson, Bill Scott, Scott Douglas and Joe Sheasgreen. Special thanks are extended to Gary Atkinson for his valuable contributions in editing this report.

Table 4. Common and scientific names of fish species identified at Miramichi River counting facilities, 1994 - 1999.

Common Name	Scientific Name
Sea Lamprey	*Petromyzon marinus*
Sturgeon	*Acipensar oxyrhynchus*
Gaspereau, Alewife	*Alosa pseudoharengus*
Gaspereau, Blueback herring	*Alosa aestivalis*
Shad	*Alosa sapidissima*
Atlantic salmon	*Salmo salar*
Brown Trout	*Salmon trutta*
Ranbow Trout	*Salmo gairdneri*
Brook Trout	*Salvelinus fontinalis*
Tiger Trout	hybrid
Smelt	*Osmerus mordax*
Chub	*Semotilus corporalis*
Dace	*Rhinichthys atratulus*
Sucker	*Catostomus commersoni*
Brown Bullhead	*Ictalurus nebulous*
American Eel	*Anguilla rostrata*
Stickleback	*Gasterosteus aculeatus*
Tomcod	*Microgadus tomcod*
White Hake	*Urophycis tenuis*
Yellow Perch	*Perca flavescens*
White Perch	*Morone americana*
Striped Bass	*Morone saxatilis*
Flounder	*Paralichthys sp.*
